

# Experiment 6: Hardness (Titrimetric)

Published

Edit

Turn in an Excel sheet containing the following:

- The concentration of the standard solution
- The concentration of the EDTA solution you made
- The water hardness in mg/L CaCO3

Include all values needed to reproduce the calculation, and show your work as best as possible.

**If you did not get data for the final titration due to buffer issues, use an endpoint volume of 3.7 ml EDTA added.**
